

Recent VeriScreen Side-by-Side Screening Analysis of Current Residents previously screened by Core Logic

The results of a recent VeriScreen side-by-side comparison revealed that Core Logic failed to identify 23% of the sample's criminal and eviction records. The sample consisted of current residents in tax credit properties from one of our targeted prospects. VeriScreen used the same criminal criteria as the current background screening provider, Core Logic. The results show that Core Logic missed about 23% of the criminal and eviction reports! In this particular study, 13% of the subsample had prior evictions that Core Logic didn't find and another 10% had criminal records that weren't found. And if that isn't enough, another 6% of the sample had identity failures such as incorrect social security numbers that Core Logic failed to find! Credit checks were not re-run by VeriScreen.

This study once again demonstrates VeriScreen's superior background screening services compared directly to another provider. VeriScreen's truly unique screening process with its trade-marked Person Search Plus™ product will increase this new client's return on investment, not to mention the enhanced safety for both the management company and their valued residents moving forward!

The above results will be added to VeriScreen's comprehensive, large-scale study focused on utilizing predictive analytics to model eviction patterns amongst tax credit property tenants. We would like to share the details of this study with you along with education around our business process and guarantees.

Please let me know when you and your organization are interested in learning more about VeriScreen and the added-value we can bring to your Affordable Housing background screening process. Your complimentary and compelling side-by-side analysis is just a call away!
